

Subject	Math	Student	Ada Chang
Student Grade	K	Student ID	2037394

Skill Progress and More Information

↑ Placement Improved from Baseline

Domain	Test (10/03/25)	Test (05/27/26)	More Information
Number and Operations ↑	At Grade K	At Grade K	At placement levels K-2 this domain addresses counting, the base-ten number system, and the operations of addition and subtraction. Test results indicate that Ada has an appropriate understanding of numerals and basic counting. Ada may be ready to further develop counting skills, including counting by 1s and counting by 10s to 100.
Algebra and Algebraic Thinking ↑	Approaching Grade K	At Grade K	At placement levels K-2 this domain addresses skip-counting, fact families, and using equations to solve addition and subtraction problems. Ada's score indicates understanding of addition and subtraction within 10. Ada may be ready to develop a deeper understanding of addition and subtraction concepts, such as understanding the relationship between these operations, representing addition and subtraction, and selecting the appropriate operation in context.
Measurement and Data	At Grade K	At Grade K	At placement levels K-2 this domain addresses the concept of measurement units, especially for length and time. It also includes showing data on simple graphs. Results indicate Ada may be ready to develop a basic understanding of comparing and sorting objects by measurable attributes, such as length and capacity.
Geometry ↑	Approaching Grade K	At Grade K	At placement levels K-2 this domain addresses attributes of basic two- and three-dimensional shapes, relationships between shapes, and simple geometric terms. Ada's score indicates an ability to understand spatial relationships, describe two-dimensional shapes, and identify basic three-dimensional shapes. Ada may be ready to compare and contrast attributes of two- and three-dimensional shapes.
